### sequencing depth vs read length

### sequencing depth vs read length

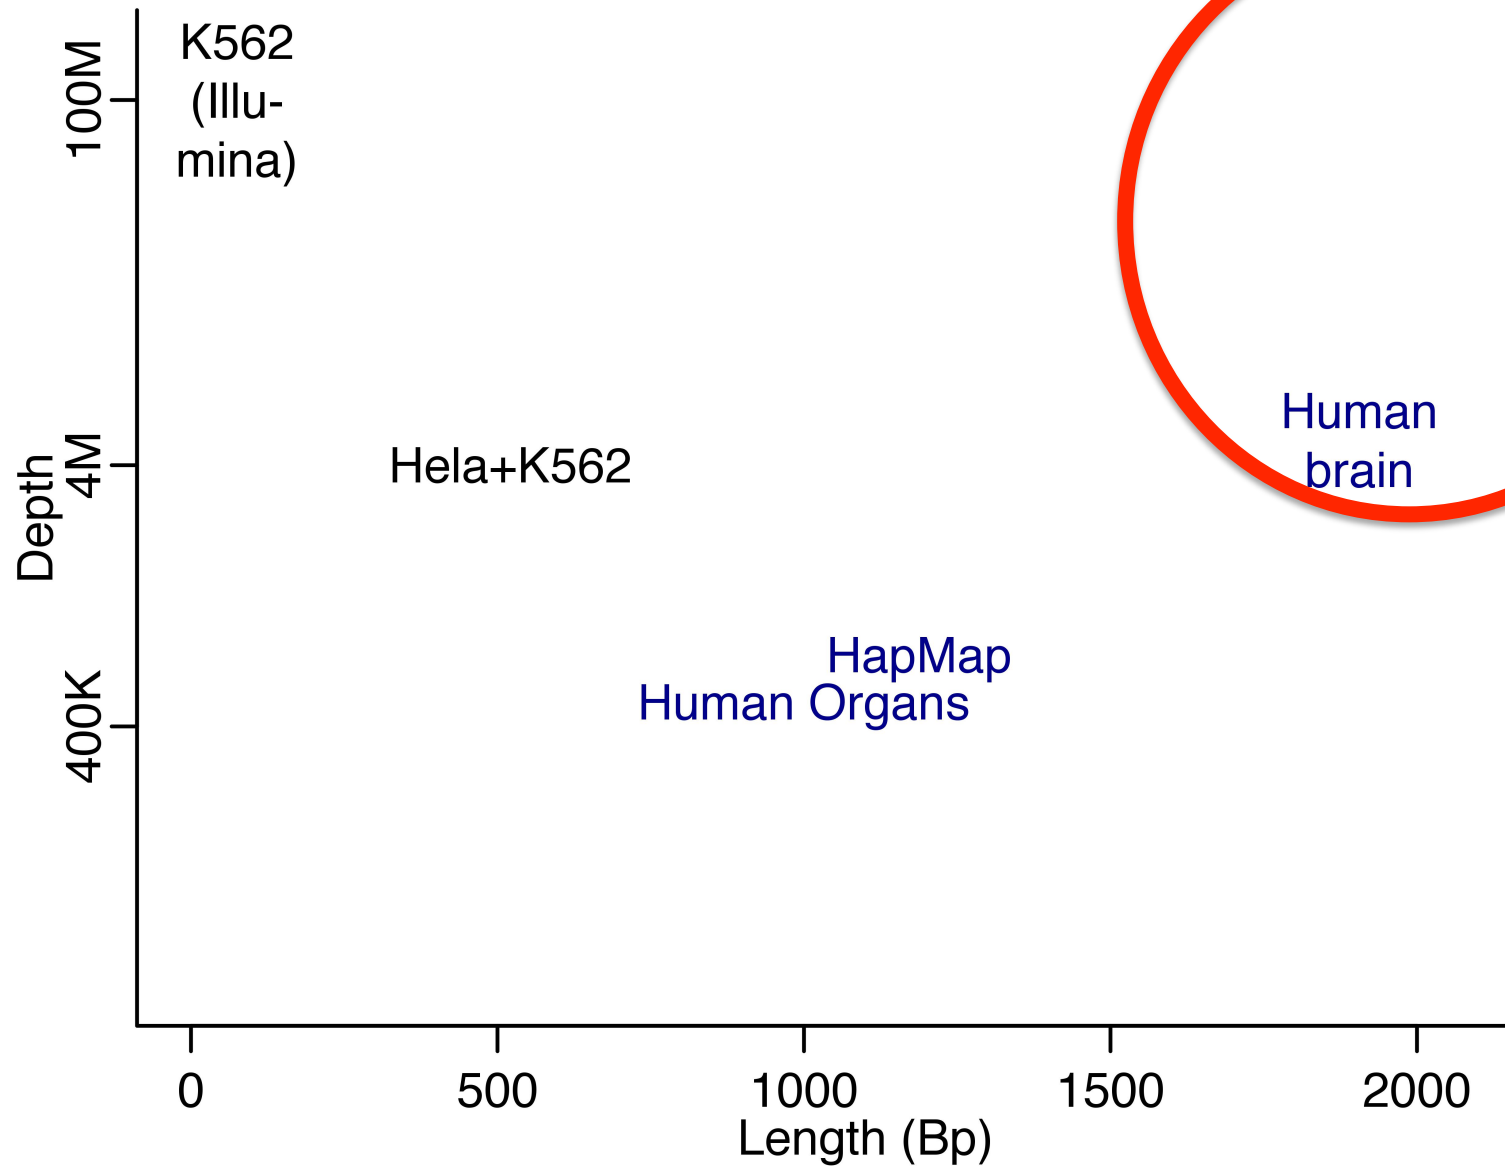

### sequencing depth vs read length

### sequencing depth vs read length

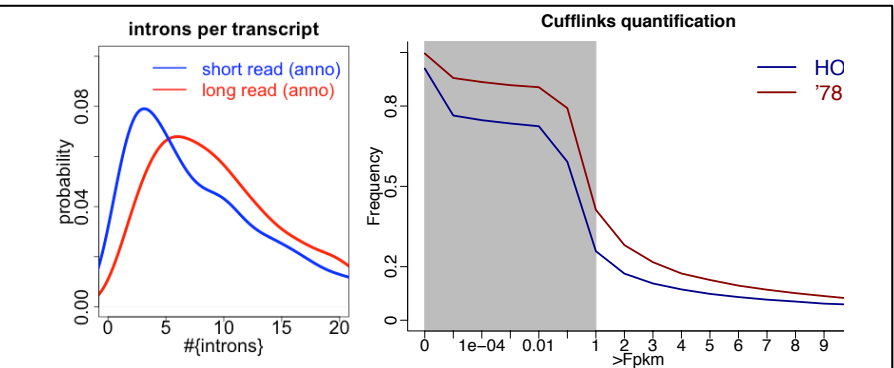

### sequencing depth vs read length

Coordination between Tilgner et al, 2017,2015, 2014

- Distant splicing events and other types
- SNPs and splicing (allele specific splicing)

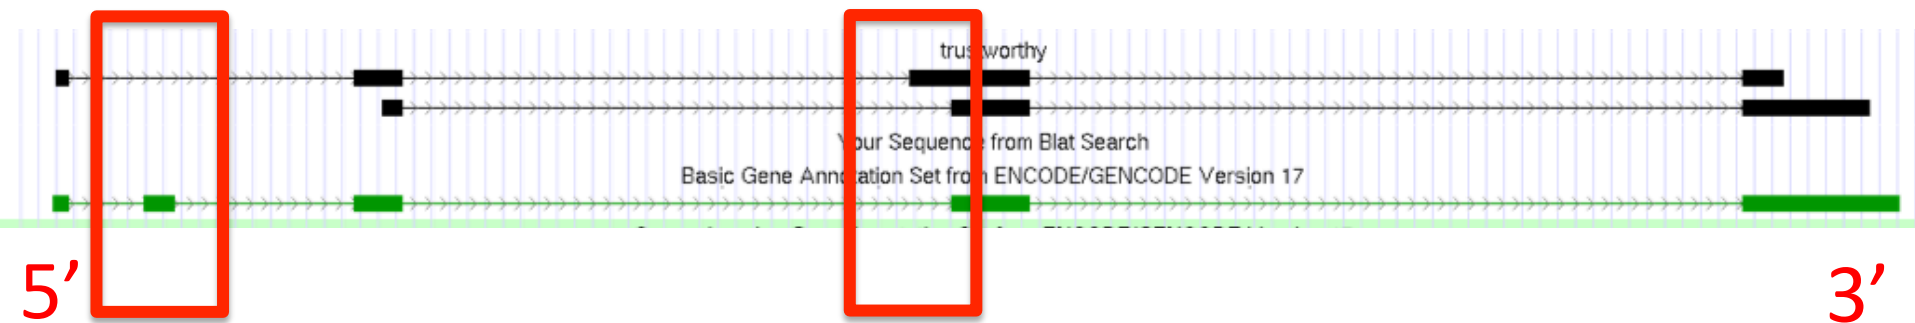

- Enhanced annotations + isoform quant.
- Better isoform discovery from short reads

Tilgner et al, 2013, 2014

- Novel lncRNA genes
- Loads of novel lncRNA isoforms
- Many protein coding RNA isoforms

Sharon et al, 2013, Tilgner et al, 2013, 2015

Extreme numbers of novel isoforms in the non-coding genome

· SLR-RNA-Seq vs. short reads

Tilgner et al,  
Nature Biotech 2015

spISO-Seq vs. short reads

Tilgner et al,  
Genome Research, 2017

**MPM: molecules per million (expression measurement for long reads)**

**PSI: Percent Spliced In for exons and splice sites (Wang et al, 2008)**

**PI: Percent Isoform values (for long reads)**

Data at: [http://stanford.edu/~htilgner/2014\\_humanMouseBrain\\_SLR\\_RNA\\_Seq/index\\_SLRseq.html](http://stanford.edu/~htilgner/2014_humanMouseBrain_SLR_RNA_Seq/index_SLRseq.html)

## EXOC7: SLR-RNA-Seq

## Coordination is (largely) reproducible in targeted experiment

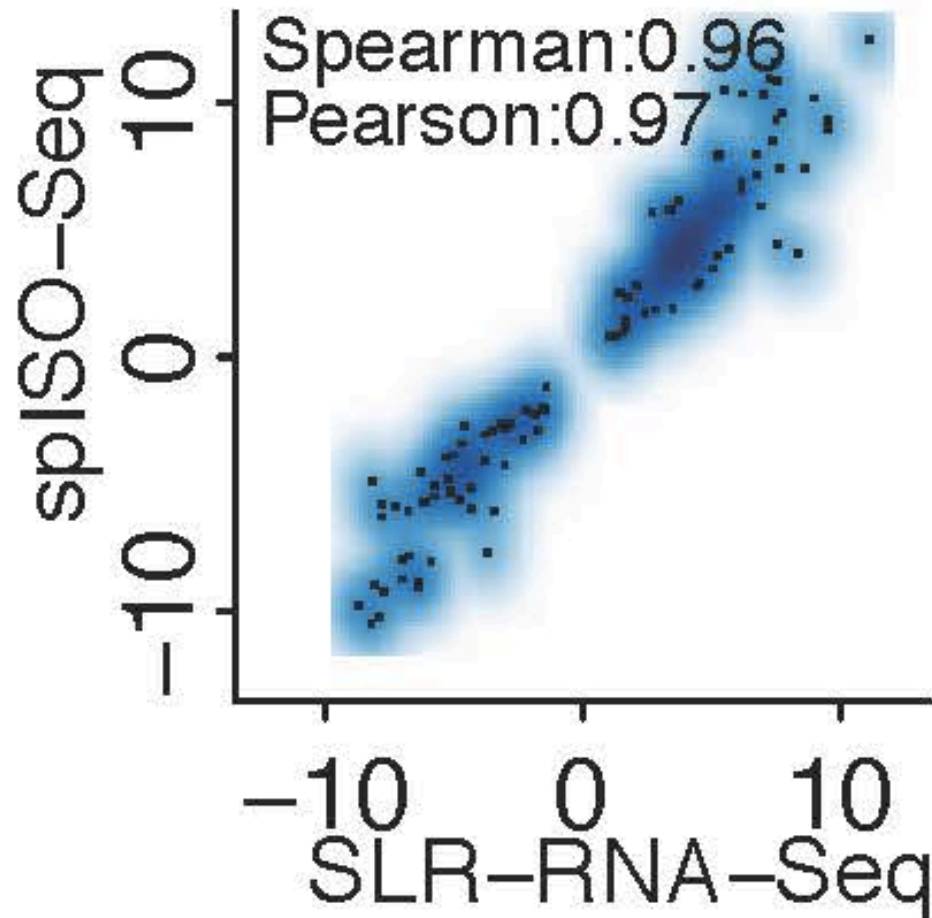

23.5%-59.3% (95% CI) of genes with multiple distant alternative exons are expected to show coordination at a log-odds-ratio of 0.5 or above.

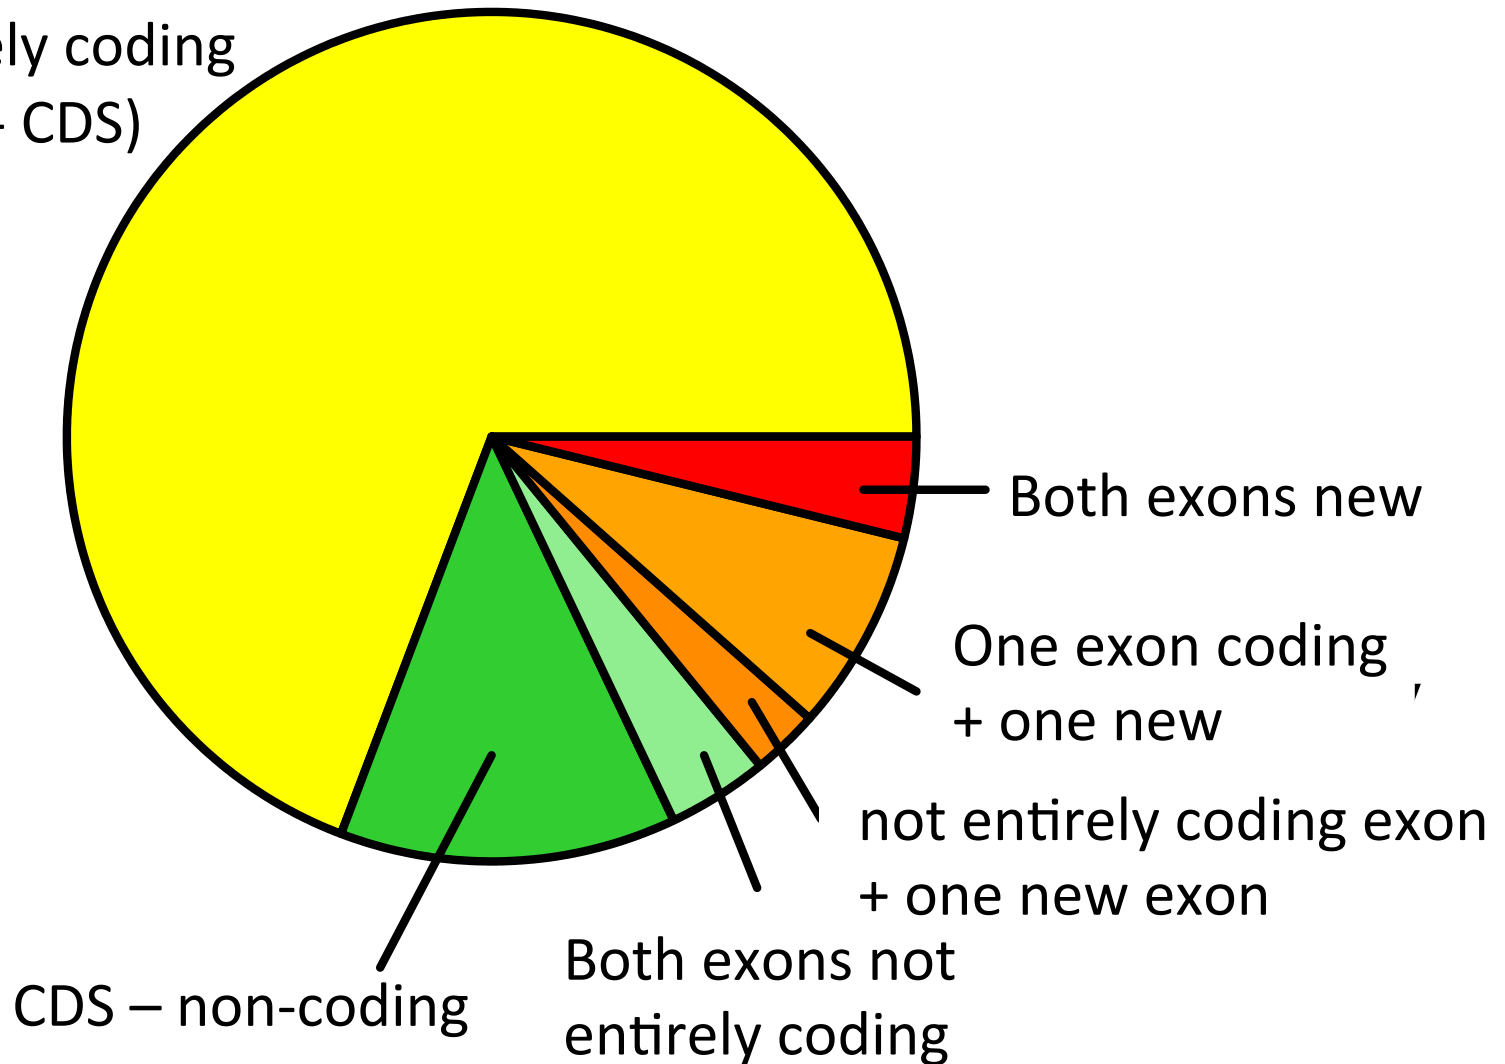

THE justification for isoform sequencing (otherwise no long reads needed ... just get probability of isoform from product of probabilities of variables sites)

## Comparability of coordination quantification

Both exons  
entirely coding  
(CDS - CDS)

**A phased brain proteome ?**

Both exons  
entirely coding  
(CDS - CDS)

Percent of pairs with non-coding part

Synthetic long reads for MAPT

Linked reads for MAPT

— coordinated pair (according to linked reads)  
— exonic position supported by 1-6 reads for this barcode  
— exonic position supported by  $\geq 7$  reads for this barcode  
— intronic position supported by spliced reads for this barcode  
— other exons

Gencode annotation for MAPT

## Synthetic long reads for MAPT

## linked reads for MAPT

## Gencode annotation for MAPT

Synthetic long reads for MAPT

Linked reads for MAPT

Genecode annotation for MAPT

# MAPT (tau) splicing is governed by coordination

# BIN1 (strongly AD associated) splicing is governed by coordination

**Discovery with Illumina -> limited by fragment size (possibly deeper)**

Synthetic long reads for *CALD1*

Linked reads for *CALD1*

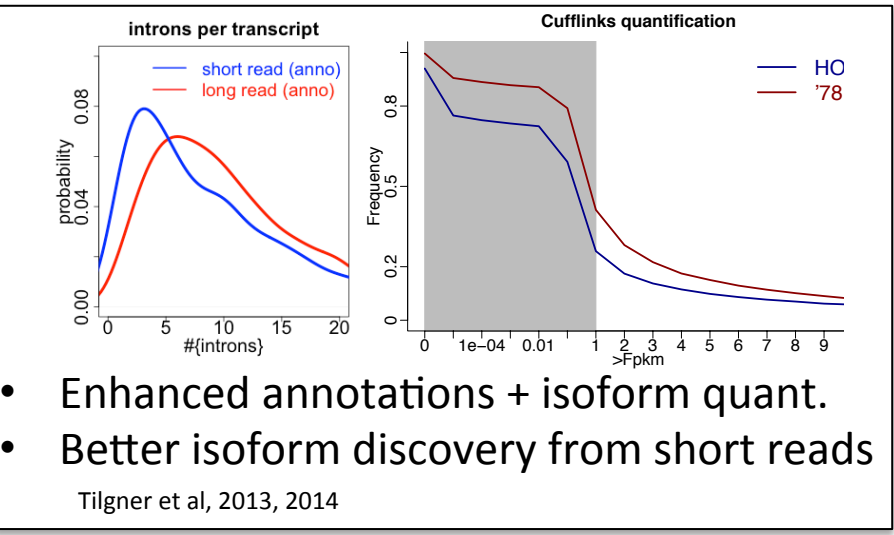

GENCODE annotation for *CALD1*

Coordination between Tilgner et al, 2017,2015,2014

- Distant splicing events and other types
- SNPs and splicing (allele specific splicing)
